### What's New in the Multi Meter Bridge?

Multi Meter Bridge is a free program that allows you to log the audio levels of multiple channels simultaneously. You can even display the log file in a specified format. Features: Monitor multiple input devices at once Adjust settings Widgets Audio options Integration Log file display Language preferences Multi Meter Bridge: Multi Meter Bridge Full Version Download: Users reviews More from the review comments Dwayne Harvane Feb 22, 2018 I was introduced to Multi Meter Bridge through a colleague. It's a free application that I'd been wanting to try. We were having a conversation about using a program to facilitate bridge work, bridge comparisons, and bridge stats. In the end, I decided to try Multi Meter Bridge. Multi Meter Bridge really seems to have a variety of uses. It can monitor multiple inputs simultaneously; all you have to do is assign the input channels to the devices you want to monitor. This includes hardware (such as a sound card) and software (such as a DJ software application). It can handle software also, like a DJ software application. Setup is easy. You just download the app, exit the program (it doesn't install the application) and launch it. The application is ready to log data right away. You can even adjust what the end screen looks like. There are a lot of options right there on that screen. The application monitors what you want to monitor, and does it very well. There is a lot more you can configure in the application. You can monitor for a lot of different variables, including pitch, loudness, distance, and many others. I can easily spend 15 minutes in the settings panel for that. Once you have it set up and configured, you can quickly access that data. There is also a log file where you can view that data. You don't have to worry about the computer crashing when you are viewing the log. It's a great application. I'd recommend it. Segment Monitor Kompressor Mar 8, 2018 Almost immediately after receiving the product, I noticed the difference in audio. It is so rich in tone and clarity. It was great to hear at the Pianos concert on Tuesday night and the weather was quite pleasant so this equipment was welcome for the Pianos concert attendees.
